CONSTRUCTION NOTES:

1. The structural steel and concrete elements shall be designed in accordance with the American Institute of Steel Construction (AISC) and American Concrete Institute (ACI) codes.

2. All steel connections shall be designed to resist shear, tension, and compression forces as required by the applicable codes.

3. Concrete elements shall be cast in accordance with the American Concrete Institute (ACI) codes.

4. All steel tubing shall be designed to resist bending moments and axial forces as required by the applicable codes.

5. All concrete elements shall be reinforced with deformed steel rebars in accordance with the American Concrete Institute (ACI) codes.

6. All steel framing elements shall be designed to resist wind and seismic loads as required by the applicable codes.

7. All concrete elements shall be placed in accordance with the American Concrete Institute (ACI) codes.

8. All steel elements shall be fabricated and erected in accordance with the American Institute of Steel Construction (AISC) codes.

9. All concrete elements shall be cured in accordance with the American Concrete Institute (ACI) codes.

10. All steel elements shall be painted in accordance with the American Institute of Steel Construction (AISC) codes.

11. All concrete elements shall be protected from weathering and chemical degradation in accordance with the American Concrete Institute (ACI) codes.

12. All steel elements shall be designed for fire resistance in accordance with the American Institute of Steel Construction (AISC) codes.

13. All concrete elements shall be designed for fire resistance in accordance with the American Concrete Institute (ACI) codes.

14. All steel elements shall be designed for earthquake resistance in accordance with the American Institute of Steel Construction (AISC) codes.

15. All concrete elements shall be designed for earthquake resistance in accordance with the American Concrete Institute (ACI) codes.

16. All steel elements shall be designed for blast resistance in accordance with the American Institute of Steel Construction (AISC) codes.

17. All concrete elements shall be designed for blast resistance in accordance with the American Concrete Institute (ACI) codes.
