

GIBRALTAR ELECTRICITY AUTHORITY

PRESS RELEASE

No: 377/2014

Date: 18th July 2014

Power outage caused by damaged cable

During works carried out by a contractor laying electrical ducts for the new power station this morning, a High Voltage cable opposite Waterport Place was damaged. This High Voltage cable feeds the transformers that supplies the low voltage supply to the new generator and turbines. The damage cut off the supply and caused the black out.

The Gibraltar Electricity Authority would like to apologise to its customers for the inconvenience caused.
