

## PRESS RELEASE

No: 430/2015

Date: 21st June 2015

---

### **Power cut on Saturday 20 June 2015**

The Gibraltar Electricity authority wishes to inform its customers that power cut which affected seven districts last night at approximately 21.50 hrs for approximately 15 minutes was caused by the two generators in the Spark Energy South District power station tripping and causing the falling frequency to activate.

Spark Energy have not released any information of the failure of these generators although the Gibraltar Electricity Authority understand that the failure could attributed to one of the generators tripping on overheating.
