### **Fuel of the Future – LNG Project to Progress to Stakeholder Engagement Phase**

Her Majesty's Government of Gibraltar thanks the ESG for their consideration of the safety reports provided by the Health and Safety Laboratory and Lloyd's Register regarding the supply and storage of LNG to the new power station.

The Government appreciates that the ESG has some remaining concerns and takes this opportunity to assure both the ESG and the general public that the issues raised are being addressed by Shell and HSL, who are working closely together as well as with the Government. The project will now progress to the next phase, which will consist of a significant consultation process to be conducted by Shell and HSL, involving all stakeholders and the local community. Shell and HSL will be engaging directly with major stakeholders, including the ESG, to understand and address any remaining concerns.

The Government commits to ensure that the appropriate regulations and standards are adhered to at every stage, not as a tick-box exercise but to make sure that the people of Gibraltar are consulted and are listened to on this important development for our future.
