Air Quality

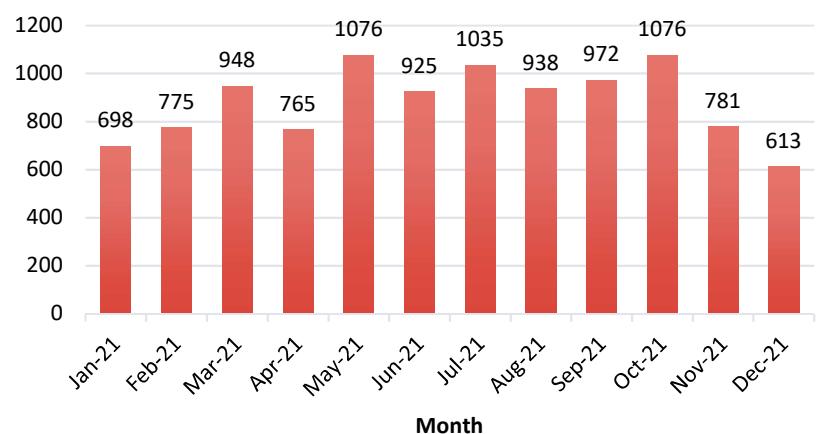

In Gibraltar, a formalised air quality monitoring programme is in operation utilising a variety of methodologies, and taking place at selected locations. Developed in accordance with European Union (EU) directive requirements, air quality in Gibraltar since 2008 has been monitored using passive sampling, active (semi-automatic) sampling, and automatic point monitoring. Deployed at sites throughout Gibraltar, these monitors work to provide a comprehensive understanding of variations in air quality according to location (urban/suburban), time, and season.

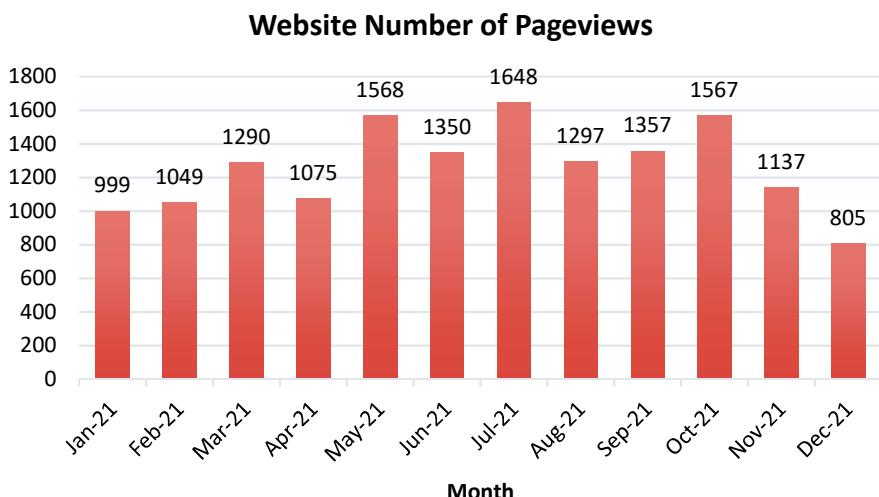

With some results available in real time, these as well as historical records can be accessed by the public at www.gibraltarairquality.gi. The table below provides a record of activity on Gibraltar's air quality website in 2021.

Annual Automatic Data Summary Reports

Rosia Road: 1st January to 31st December 2021

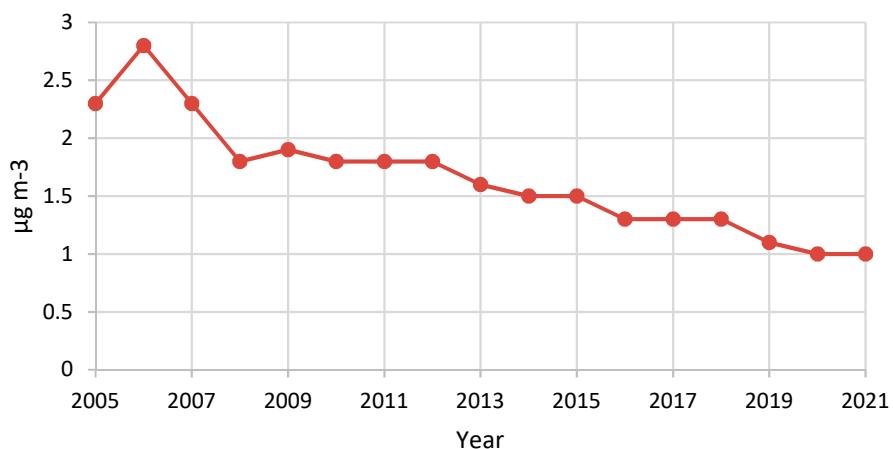

At Rosia Road, concentrations for pollutants such as benzene, carbon monoxide (CO), nitrogen dioxide (NO₂), and sulphur dioxide (SO₂) are logged. Records for 2021 are as follows:

Benzene

POLLUTANT	BENZ
Maximum hourly mean	14 µg m ⁻³
Maximum running 8-hour mean	8.8 µg m ⁻³
Maximum running 24-hour mean	6.5 µg m ⁻³
Maximum daily mean	4.6 µg m ⁻³
Data capture	86 %

Carbon Monoxide	Running 8-hour mean $> 10.0 \text{ mg m}^{-3}$	0
Nitrogen Dioxide	Hourly mean $> 200 \text{ } \mu\text{g m}^{-3}$	3
Sulphur Dioxide	Annual mean $> 20 \text{ } \mu\text{g m}^{-3}$	0

Rosia Road pollutant exceedances for 2021.

Three threshold exceedances were detected for nitrogen dioxide at Rosia Road in 2021.

South District Power Stations

The table below highlights the engine operating hours of South District power stations in 2021.

Engine Hours	Total 2021
GMES South Temp. Gen. (Sets 21-30)	1,076 hours

South District Power Stations engine hours in 2021.

Bleak House: 1st January to 31st December 2021

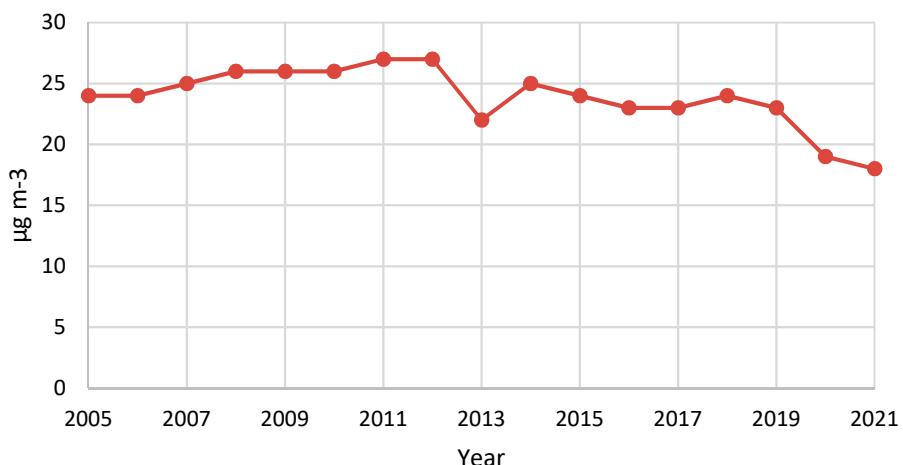

At Bleak House, nitrogen dioxide and ozone (O₃) concentrations are monitored. Results for the suburban area in 2021 are as follows:

Nitrogen Dioxide

POLLUTANT	NO ₂
Maximum hourly mean	129 $\mu\text{g m}^{-3}$
Maximum running 8-hour mean	79 $\mu\text{g m}^{-3}$
Maximum running 24-hour mean	60 $\mu\text{g m}^{-3}$
Maximum daily mean	60 $\mu\text{g m}^{-3}$
Data capture	88 %

Exceedances

Pollutant	Public Health (Air Quality Limit Values) Rules 2002, (Amendment) Rules 2003 and (Ozone) Rules 2004	Exceedances
Nitrogen Dioxide	Hourly mean > 200 $\mu\text{g m}^{-3}$	0
Ozone	Running 8-hour mean > 120 $\mu\text{g m}^{-3}$	1

Bleak House pollutant exceedances for 2021.

Data collected show that there was one recorded exceedance of Ozone at Bleak House in 2021. Ozone is formed by the sunlight-initiated oxidation of volatile organic compounds (VOCs) in the presence of nitrogen oxides (NO_x). Not produced locally, this pollutant is created from ozone precursors that are predominantly of a transboundary nature.

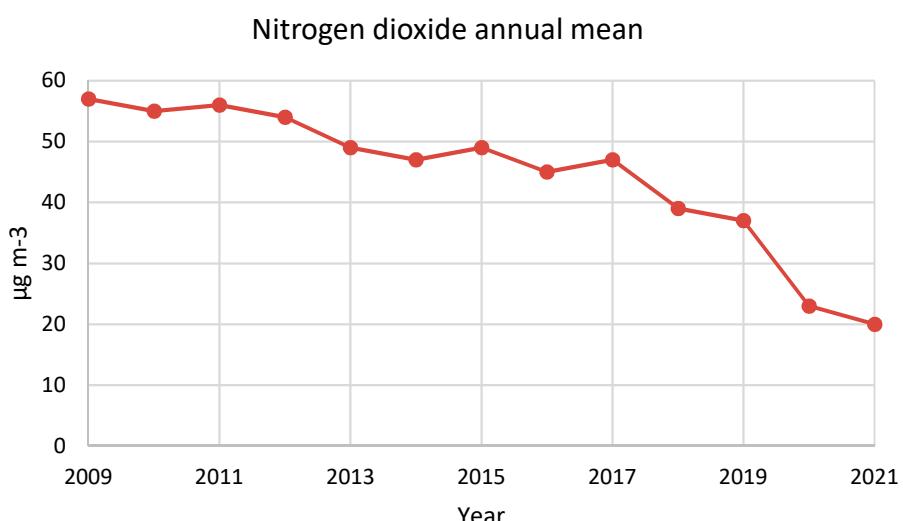

Witham's Road: 1st January to 31st December 2021

As the third automatic monitoring station, Witham's Road is located in the South District and within range of the South District power stations. Positioned here intentionally to observe the effects of traffic and power station emissions on pollutant levels, nitrogen dioxide is recorded at this site and has been monitored since 2008.

Nitrogen Dioxide

POLLUTANT	NO ₂
Maximum hourly mean	96 $\mu\text{g m}^{-3}$
Maximum running 8-hour mean	71 $\mu\text{g m}^{-3}$
Maximum running 24-hour mean	56 $\mu\text{g m}^{-3}$
Maximum daily mean	53 $\mu\text{g m}^{-3}$
Data capture	60 %

Witham's road pollutant exceedances for 2021.

In 2021, no threshold exceedances were recorded at Witham's road.

Overview of Gibraltar's automatic air pollution measurement

To ensure the accuracy and reliability of all results documented by Gibraltar's air quality monitoring programme, substantial data capture is necessary. The table below provides an indication on Gibraltar's percentage of data capture, compared to that of the UK.

2021	CO	NO2	O3	PM10	PM2.5	SO2
Number of Stations	7	161	76	93	82	28
Number of stations < 85%	5	20	6	11	11	11
Number of stations < 90%	5	29	8	15	18	16
Average data capture (%) (UK)	75.26	91.89	93.49	93.66	92.43	84.11
Average data capture (%) (Gib)	42	81.7	93	25	0	24

Data capture 2021.

Unfortunately, in 2021 data quality and quantity issues were experienced throughout the network as much of the monitoring kit in place had exceeded its expected operational lifespan and was in need of repair or replacements. This resulted in low data capture for many pollutants and a complete absence of data for some. Ongoing configuration of the network including the installation of new equipment and associated network enhancements will be undertaken in 2022.

Compliance with Air Quality Limit Values

To ensure compliance with air quality limit values, it is necessary to compare gathered data with relevant policy thresholds. Within this section, pollutants from the automatic monitoring framework (carbon monoxide, nitrogen dioxide, sulphur dioxide and ozone) are evaluated, with failures to meet standards highlighted in red, and compliant values highlighted in green.

Air quality objective for CO (as maximum daily running 8hr mean)	Recorded levels (as maximum daily running 8hr mean)

Maximum rolling 8-hour mean for Ozone in 2021.

Review of Gibraltar's non-automatic air pollution measurements

As part of Gibraltar's non-automatic monitoring programme, concentrations of particulates and heavy metals such as arsenic (As), cadmium (Cd), nickel (Ni), and lead (Pb) are measured. Assessed against limit values and objectives, the following series of data highlights compliant figures in green and non-compliant in red.

Lead

Air Quality Objective for Lead (measured as an annual mean)	Recorded Annual Mean
0.5 $\mu\text{g m}^{-3}$	0.006 $\mu\text{g m}^{-3}$ (Rosia Road)
	0.0043 $\mu\text{g m}^{-3}$ (Bleak House)

Recorded annual mean for Lead in 2021.

Arsenic, Cadmium, Nickel & Poly Aromatic Hydrocarbons (measured as Benzo(a)pyrene).

Pollutant	Parameter	Target Value	Recorded Average
Arsenic	Annual average	6 ng m^{-3}	1.3 ng m^{-3} (Rosia Road) 1.2 ng m^{-3} (Bleak House)
Cadmium	Annual average	5 ng m^{-3}	1.6 ng m^{-3} (Rosia Road) 1.5 ng m^{-3} (Bleak House)
Nickel	Annual average	20 ng m^{-3}	12 ng m^{-3} (Rosia Road) 9.2 ng m^{-3} (Bleak House)
BAP	Annual average	1 ng m^{-3}	0.002 ng m^{-3} (Rosia Road)

4th Daughter Directive pollutant recordings for 2021.

Diffusion Tube Networks

Integral to the non-automatic monitoring programme, a diffusion tube based method is used to assess monthly average concentrations of nitrogen dioxide and benzene at a number of sites across Gibraltar. Diffusion tube results are indicative only and not as reliable as the automatic monitoring network.

Summary of Hydrocarbons

Below, average hydrocarbon concentrations for benzene are shown. With a pollutant threshold of 5 $\mu\text{g m}^{-3}$, the table highlights where compliance has been achieved, and also provides a comparison to the previous year's results to determine whether there are improvements being made.

Bathing Water

The Bathing Water Directive (2006/7/EC), adopted on 15th February 2006, was transposed into Gibraltar law by the Environment (Quality of Bathing Water) Regulations 2009. In accordance with the requirements of this legislation, regular monitoring is carried out at Gibraltar's six bathing areas - Camp Bay, Catalan Bay, Eastern Beach, Little Bay, Sandy Bay Western Beach – and more. The number of samples taken at respective sites in 2021 is as follows:

Site Name	Number of samples taken
Camp Bay	19
Little Bay	19
Catalan Bay	20
Sandy Bay	19
Sandy Bay Outer Groyne	10
Eastern Beach	19
Eastern Beach Frontier Fence	19
Western Beach	19
GASA pier	6
Rosia Bay Beach	3
Rosia Bay Pier	10

Number of samples taken as part of Environment (Quality of Bathing Water) Regulations 2009 monitoring.

Further to these legislative requirements, there is also a need to monitor for two microbiological indicators of faecal contamination: *E.coli* and intestinal enterococci. Classified into four categories being: “excellent”, “good”, “sufficient”, or “poor”, the analyses of these samples consider the results over the current bathing season and the preceding three years instead of a single year’s result. In this way, classifications will be less susceptible to bad weather or one-off incidents, and provide results that are more reliable.

Coastal Water Monitoring

The Department of the Environment and Climate Change carries out coastal water sampling on a regular basis at locations detailed on the map provided. In line with the Water Framework Directive (WFD) 2000/60/EC, a large variety of chemical and physio-chemical parameters are monitored at different locations and frequencies throughout the year.

November 2021 Coastal Monitoring Results.

Coastal results for 2021 are all compliant with thresholds of the Water Framework Directive (WFD) 2000/60/EC.

Groundwater Monitoring

As part of the Water Framework Directive (WFD) 2000/60/EC, the Department of the Environment and Climate Change also operates a groundwater monitoring programme where a specific range of chemical/physio-chemical parameters are recorded on a quarterly basis. Readings are taken at four monitoring points in the Northern Isthmus aquifer and 1 monitoring point in the Southern bedrock aquifer as illustrated below.

Groundwater sampling points.

Nesting Birds of Prey

As part of their work, the Gibraltar Ornithological and Natural History Society (GONHS) conducts bird of prey surveys on an annual basis during the breeding season. Records are kept on the nesting of Peregrines (*Falco peregrinus*), Common Kestrel (*Falco tinnunculus*), and Lesser Kestrel (*Falco naumanni*). These records are shown in the following section.

Lesser and Common Kestrel

Yellow-legged Gulls

The Upper Rock Nature Reserve and the eastern sand slopes continue to be the main nesting sites for Yellow-legged Gulls. As with previous years, licensed culling of yellow-legged gulls continues to take place. The table below provides an indication of the demographics being targeted, and shows that 1534 yellow-legged gulls were culled in 2021. This is 415 less than the previous year.

Waste

Hazardous Waste

Hazardous waste materials are stored under strict licence conditions, and then processed for trans-frontier shipment to destinations where they can be adequately disposed of. Typically consisting of waste oils and asbestos containing products, the table below shows a breakdown of total exported hazardous wastes in 2021.

Waste Code	Description of Waste	Total Exported (tonnes)
19 01 13*	Fly Ash containing dangerous substances	0.57
19 01 11*	Bottom Ash and slag containing dangerous substances	10.42

WEEE

Due to the mixed and often hazardous nature of WEEE, regulations are in place to ensure that all categories of this waste are responsibly handled, treated and disposed of where necessary. The table below highlights which categories are encompassed under this umbrella of enforcement, and details how much is being treated and recovered to create a new life cycle.

Energy Lighting

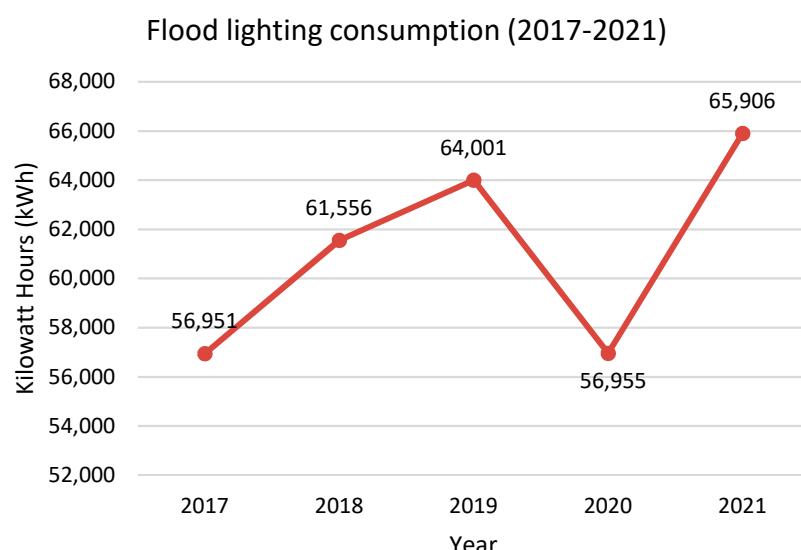

As part of H.M. Government's initiative to improve energy efficiency, the Gibraltar Electricity Authority (GEA) has systematically carried out the installation of LED lighting throughout different sectors to reduce energy consumption and consequently carbon emissions. The graphs below illustrate the progress of this programme over the last five years.

Street Lighting

Solar Energy

In line with EU targets for sourcing 20% of energy by 2020, H.M. Government of Gibraltar currently has a variety of solar energy projects in place with plans to increase this further. A breakdown of energy produced at some existing sites is shown below.

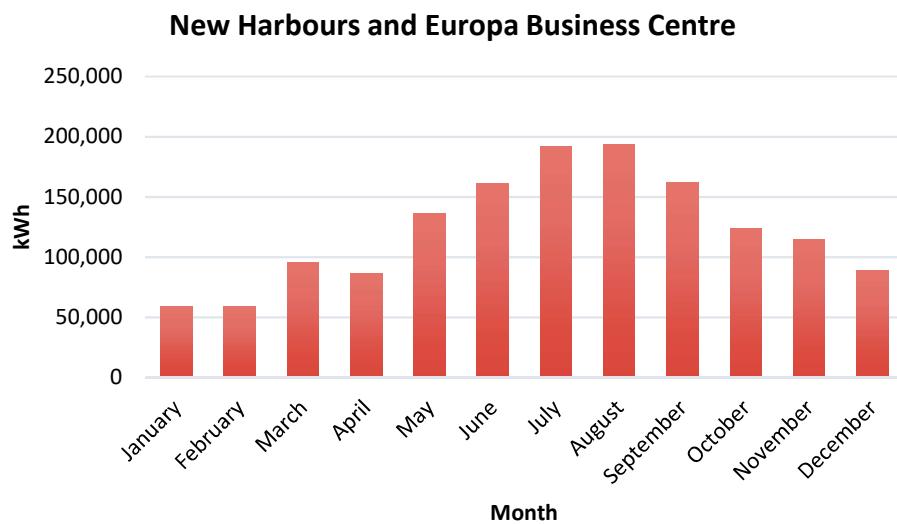

Solar energy produced at St Bernard's Hospital in 2021.

At St Bernard's Hospital, an installed capacity of 26 kW (peak) is in place. In 2021, a total of 13,453 kWh was generated resulting in a saving of £1,749.00.

Solar energy produced at GASA in 2021.

At GASA, an installed capacity of 87.7 kW (peak) is in place. In 2021, a total of 60,421 kWh was generated resulting in savings of £7,855.00.

Solar energy produced at New Harbours in 2021.

The New Harbours site is equipped with an installed capacity of 800 kW (peak), and Europa Business Centre with a 450 kW installed capacity. In 2021, both sites were able to generate a total of 1,474,039 kWh, and result in a savings of £191,625.00.
