Updated 16 September 2019

Note:

Table 30 now incorporates Tables 24,25,26,27,28,29

Urgent cases are given appointments within one day to two weeks, depending on the urgency

NICE Guidelines are not followed except with cancer patients who are seen within 2 weeks of their initial diagnosis.

The longest waiting times are in relation to Orthopaedic appointments.

Note:

Table 30 now incorporates Tables 24,25,26,27,28,29

Urgent cases are given appointments within one day to two weeks, depending on the urgency

NICE Guidelines are not followed except with cancer patients who are seen within 2 weeks of their initial diagnosis.

The longest waiting times are in relation to Orthopaedic appointments.

- Dr Duran & Dr Lines take their own referrals and book patients in themselves - referrals are not seen once they are passed on.

Dr Inkster also books patients herself. She then hands the referrals back to the MIU clerk in order to call patients etc.

Cardiology routine appointments have been backlogged since Dr Mejia's departure. In order to tackle the backlog, over 150 patients have been seen in QuironSalud, Palmones over the last few months.

A new cardiologist will be starting permanently in August, therefore only URGENT referrals are now being sent to Quiron. Once we have the clinics confirmed, routine referrals will be booked in.

\* Neurology patients are usually seen by Dr Gracia & Visiting consultant Dr Heaney. Dr Heaney specialises in epilepsy & fits. He comes over for clinics every 2 months on average, sometimes 1 extra day during the interim. He usually

on occasions he will ask the MIU clerk to book in urgent referrals for as early as the same week as extras. He tends to see new patients within 4 -6 weeks.

**Cardiology** - Routine appointments for new patients have been backlogged since Dr Mejias's departure. In order to reduce the backlog patients are being offered to have their consultation in QuironSalud, Palmones, Spain.

Currently over 140 patients have been given appointments in Quiron.

Urgent referrals would be booked in on his next visit so waiting time would depend on date of referral.

GHA.30 - Average waiting times to obtain an appointment with a Hospital Consultant after referral from a GP

31 July 2019

Updated 22 May 2019

Note:

Table 30 now incorporates Tables 24,25,26,27,28,29

Urgent cases are given appointments within one day to two weeks, depending on the urgency

NICE Guidelines are not followed except with cancer patients who are seen within 2 weeks of their initial diagnosis.

The longest waiting times are in relation to Orthopaedic appointments.

MIU - All routine waiting times increased due to Christmas/end of year leave.

Dr Duran & Dr Lines take their own referrals and book patients in themselves- any referrals received by clerk are passed on.

Dr Duran & Dr Lines take their own referrals and book patients in themselves- any referrals received by clerk are passed on.

Dr Inkster also books patients appointments herself. However she then hands referral letter to receptionist to call patients and inform of appointment.

Cardiology - Routine appointments have been backlogged since Dr Mejia's departure. May's referrals have been booked in for October and we should have waiting times reduced by 50% once all referrals from June to August have been given appointments. Please note that waiting times have increased in December due to there being no consultant for Wednesday's clinic, Dr Ruiz will return in January 2019. Dr Pena has announced he will not be returning for clinics after December so we can expect further increased in waiting times.

Neurology - Patients are usually seen by Dr Gracia & Visiting Consultant Dr Heaney who specialises in epilepsy & fits. Dr Heaney visits every 2 months on average.

Urgent referrals would be booked in on his next visit. Dr Gracia specialises in strokes.

Updated 2 April 2019

Note:

Table 30 now incorporates Tables 24,25,26,27,28,29

Urgent cases are given appointments within one day to two weeks, depending on the urgency

**NICE Guidelines** are not followed except with cancer patients who are seen within 2 weeks of their initial diagnosis.

The longest waiting times are in relation to Orthopaedic appointments.

**MIU** - All routine waiting times increased due to Christmas/end of year leave.

Dr Duran & Dr Lines take their own referrals and book patients in themselves- any referrals received by clerk are passed on.

Dr Duran & Dr Lines take their own referrals and book patients in themselves- any referrals received by clerk are passed on.

Dr Inkster also books patients appointments herself. However she then hands referral letter to receptionist to call patients and inform of appointment.

**Cardiology** - Routine appointments have been backlogged since Dr Mejia's departure. May's referrals have been booked in for October and we should have waiting times reduced by 50% once all referrals from June to August have been given appointments. Please note that waiting times have increased in December due to there being no consultant for Wednesday's clinic, Dr Ruiz will return in January 2019. Dr pena has announced he will not be returning for clinics after December so we can expect further increased in waiting times.

**Neurology** - Patients are usually seen by Dr Gracia & Visiting Consultant Dr Heaney who specialises in epilepsy & fits. Dr Heaney visits every 2 months on average.

Urgent referrals would be booked in on his next visit. Dr Gracia specialises in strokes.
